Casting process. The casting process minimises the deposit of pollution and corrosive particles as well as being strong and waterproof. The active parts are cast with a resin mixture of quartz flour and epoxy resin after being secured to a mould and preheated under vacuum.

Cast Resin Transformers | Hanley Energy

An alloy is a mixture of chemical elements, which forms an impure substance (admixture) that retains the characteristics of a metal. An alloy is distinct from an impure metal in that, with an alloy, the added elements are well controlled to produce desirable properties, while impure metals such as wrought iron are less controlled, but are often considered useful.

API Spec 5L is an International Standard that specifies requirements for the manufacture of two product specification levels (PSL 1 and PSL 2) of seamless and welded steel pipes for use in pipeline transportation

systems in the petroleum and natural gas industries.

API SPEC 5L : Specification for Line Pipe | Hardcopy & PDF

Metallurgy is a domain of materials science and engineering that studies the physical and chemical behavior of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys. Metallurgy is used to separate metals from their ore. Metallurgy is also the technology of metals: the way in which science is applied to the production of metals, and the engineering of ...

CG LV cast iron motor range covers products with outputs from 0.18 kW to 375kW in frame sizes 63 to 355. They are suitable for use within a diverse range of applications from pharmaceutical to steel production, from crane to roller table drives, many applications often have adverse operating conditions including repeated starting and occasional overloading; Our LV standard and custom made ...
